

## RMBI 3010 - Data Analytics with R (2022-23 Fall Term)

---

### General Information:

- 2 Credits (Letter Graded)
  - Lecture + Lab: (L1 + LA1) Mon 01:30PM - 04:30PM LSKG005
  - Instructor: Prof. Jean WANG <[jeanwang@ust.hk](mailto:jeanwang@ust.hk)> Rm: LSK 5050A (office hour by appointment)
  - TA: Mr. Shivendra SINGH <[eesingh@ust.hk](mailto:eesingh@ust.hk)> Rm: LSK 4049A (office hour by appointment)
- 

### Course Description

This course provides an introduction to R as a programming language and environment for data analytics and visualization. R is popular in many fields and industries for small and big data applications. It is open-source and backed by a huge community that creates new tools and packages every day.

The course will first cover the basic syntax of R language, including functions and flow control. Then, it will introduce some commonly used data structures, such as vectors, lists, matrices and data frames. Next, data importing and visualization in R will be presented. Furthermore, the course will also introduce a few primary data cleaning techniques in dealing with missing values, duplicates and inconsistency, and how to implement simple data transformation and normalization with R. Last, some classic data mining models and the corresponding packages in R will also be presented. Each session of the course will consist of presentations and demos on the topic and hands-on exercises for students to practice.

---

### Teaching Schedule (tentative)

WK	Lecture Topic
1	<p><i>[Sep 5]</i></p> <p>Lec01 - Basic Syntax of R</p> <ul style="list-style-type: none"> <li>• RStudio IDE</li> <li>• Basic data types</li> <li>• Read and write text files</li> <li>• Import and export files</li> </ul>
2	<p><i>[Sep 12]</i></p> <p><i>No Class (Public Holiday)</i></p>
3	<p><i>[Sep 19]</i></p> <p>Lec02 - Flow of Control in R</p> <ul style="list-style-type: none"> <li>• Flow of control</li> <li>• Functions</li> <li>• Special values</li> <li>• Data cleaning basics</li> </ul>
4	<p><i>[Sep 26]</i></p> <p>Lec03 - Data Plotting in R</p> <ul style="list-style-type: none"> <li>• Basic plots</li> <li>• Plot options</li> </ul>

	<ul style="list-style-type: none"> <li>• Basic graphic functions</li> <li>• Intermediate plots</li> </ul>
5	<p><i>[Oct 03]</i></p> <p>Lec04 - Exploratory data analysis in R</p> <ul style="list-style-type: none"> <li>• Frequency count and aggregation</li> <li>• Normality test</li> <li>• Correlation plot</li> <li>• Linear regression</li> </ul>
6	<p><i>[Oct 10]</i></p> <p>Lec05 - Text Processing in R</p> <ul style="list-style-type: none"> <li>• String manipulation</li> <li>• Regular expression</li> <li>• Word frequency</li> <li>• Document-term matrix</li> </ul>
7	<p><i>[Oct 17]</i></p> <p><i>Midterm Test</i></p>
8	<p><i>[Oct 24]</i></p> <p>Lec06 - Web Scraping in R</p> <ul style="list-style-type: none"> <li>• HTML basics</li> <li>• CSS basics</li> <li>• <i>rvest</i> library</li> </ul>
9	<p><i>[Oct 31]</i></p> <p>Lec07 - Interactive Dashboard in R</p> <ul style="list-style-type: none"> <li>• <i>shiny</i> library</li> <li>• R Markup</li> <li>• Publish to Web</li> </ul>

---

## Assessments and Weighting

- **Attendance and Class Participation (10%):** 7 weeks  
Students are required to attend all lectures, and are strongly encouraged to interact with the instructor and peers during the lectures.
- **Weekly Exercises (30%):** 6 highest marks out of 7 submissions  
These are individual continuous assessments. Each week, students are given a real-world business data set and a series of data analysis tasks. They are required to follow the instructions to complete an R script file, in order to accomplish a specific data analysis task. After finishing, students need to submit their script file to present their findings.
- **Midterm Test (30%):** week 7  
This is an individual close-book assessment. The test paper includes short answer questions and short coding questions. The scope includes all topics covered in lectures notes and exercises, from Lec01 to Lec05.
- **Final Project (30%):** end of semester

Each student needs to crawl and download a data set from a website, write R code to conduct data analysis on the set, and summarizes his/her findings. The submission includes the R code and a report.
